

Virtual Microscopy: The UCL experience

Marco Novelli

Virtual microscope

Hamamatsu Nanozoomer

Overview

- Research.
- Scanning - image quality, reliability etc.
- Use of virtual microscopy in routine histopathological reporting.
- Current areas of clinical interest.
 - Remote reporting
 - UK EQA schemes
 - Teaching
- Areas of difficulty.

Overview

- ~~Research~~
- Scanning - image quality, reliability etc.
- Use of virtual microscopy in routine histopathological reporting.
- Current areas of clinical interest
 - Remote reporting
 - UK EQA schemes
 - Teaching
- Areas of difficulty

Scanning - image quality,
reliability etc.

Dahmane Oukrif – Research Fellow

Scanning

- Simple.
- Reliable.
- Relatively quick.
- High quality images.
- Simple effective viewer (NDP.view)

Use of virtual microscopy in routine clinical histopathology

Radiologists have PACS.
How about virtual microscopy for pathologists?

Use of virtual microscopy in routine clinical histopathology

- Current UK situation:
 - Capacity
 - Cost
 - Reporting speed
 - Pathologist compliance

Capacity

- UCLH
 - Medium sized UK teaching hospital.
 - 21,000 cases per annum
 - 120,000 slides per annum
 - 500MB per slide

Capacity

- UCLH
 - Medium sized UK teaching hospital.
 - 21,000 cases per annum
 - 120,000 slides per annum
 - 500MB per slide
- **60,000 GB / 60 Terabytes**

Capacity

- UCLH
 - Medium sized UK teaching hospital.
 - 21,000 cases per annum
 - 120,000 slides per annum
 - 250 working days
 - 480 slides/day

Capacity

- UCLH
 - Medium sized UK teaching hospital.
 - 21,000 cases per annum
 - 120,000 slides per annum
 - 250 working days
 - 480 slides/day

Scanning time @ 5mins/slide

2400 minutes = 40 hours/day.

Capacity

- UCLH
 - Medium sized UK teaching hospital.
 - 20,000 cases per annum
 - 100,000 slides per annum
 - 250 working days
 - 400 slides/day

Scanning time @ 5mins/slide

2400 minutes = 40 hours.

→ **3+ Nanozoomers**

Cost

- Technician(s) to scan slides - ? € 30000+/pa
- Virtual microscope(s) - ? € 100,000+ each
- Computer, monitor and network upgrades -?? €
- Unlike radiology (PACS)
 - Unlikely for clinicians to want to see images.
 - ALL ON COSTS (no change in processing etc).
 - Little (if any) saving.

Reporting speed and pathologist compliance

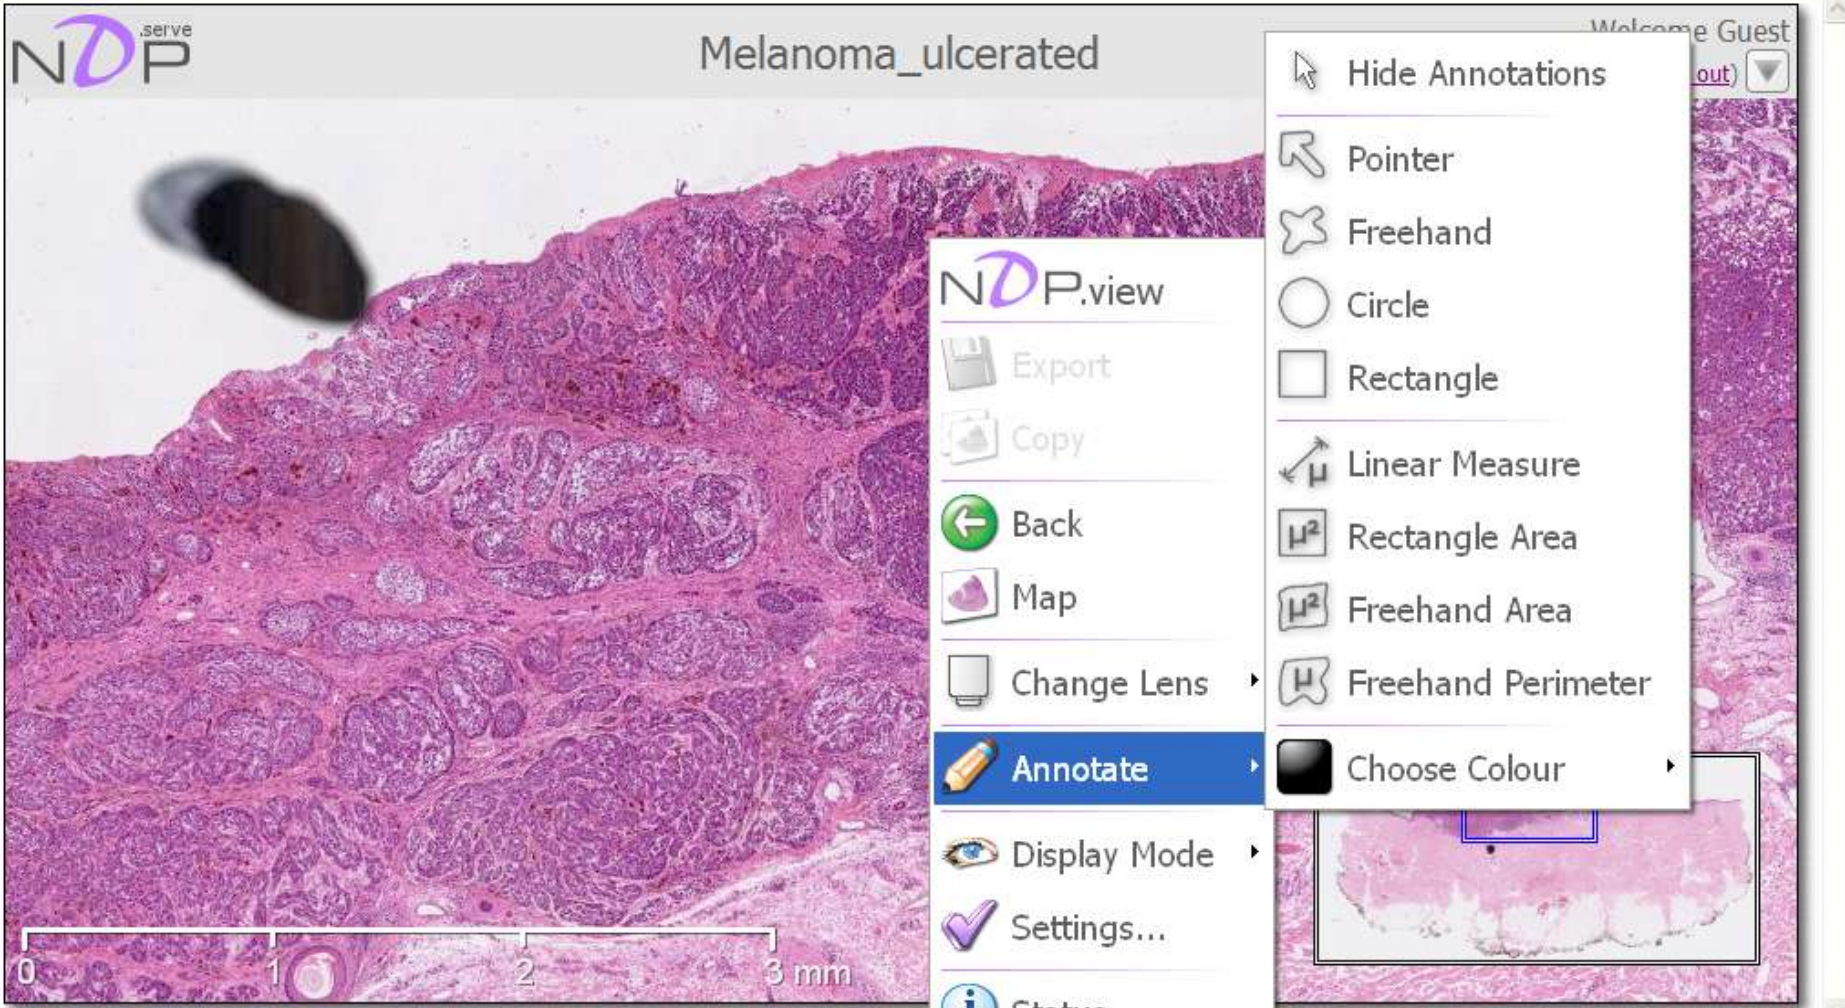

- Over local network reporting speed very fast.
- Pathologists will have to “learn” how to use systems (inherently conservative!).
- Benefits of virtual images need to be emphasised
 - Measurements (e.g. Breslow thickness).
 - Counts (e.g. Proliferation index assessment).
 - Remote reporting – flexible working.

Use of virtual microscopy in routine clinical histopathology

- Current UK situation:
 - **Capacity** ✓
 - **Cost** X
 - **Reporting speed** ✓
 - **Pathologist compliance** ?

Current areas of clinical interest

Remote reporting

- Is remote reporting feasible?
- Why would you want remote reporting?
- Where and how should we start?

Remote reporting

- Is remote reporting feasible?

Remote reporting

- Is remote reporting feasible?

Remote reporting

- Is remote reporting feasible?

Schistosomiasis

Remote reporting

- Is remote reporting feasible?

YES

Remote reporting

- Why would you want remote reporting?

Remote reporting

- Why would you want remote reporting?
 - Lack of local histopathologist/expertise
 - Frozen sections at remote/satellite hospital
 - Expert/specialist opinion

Remote reporting

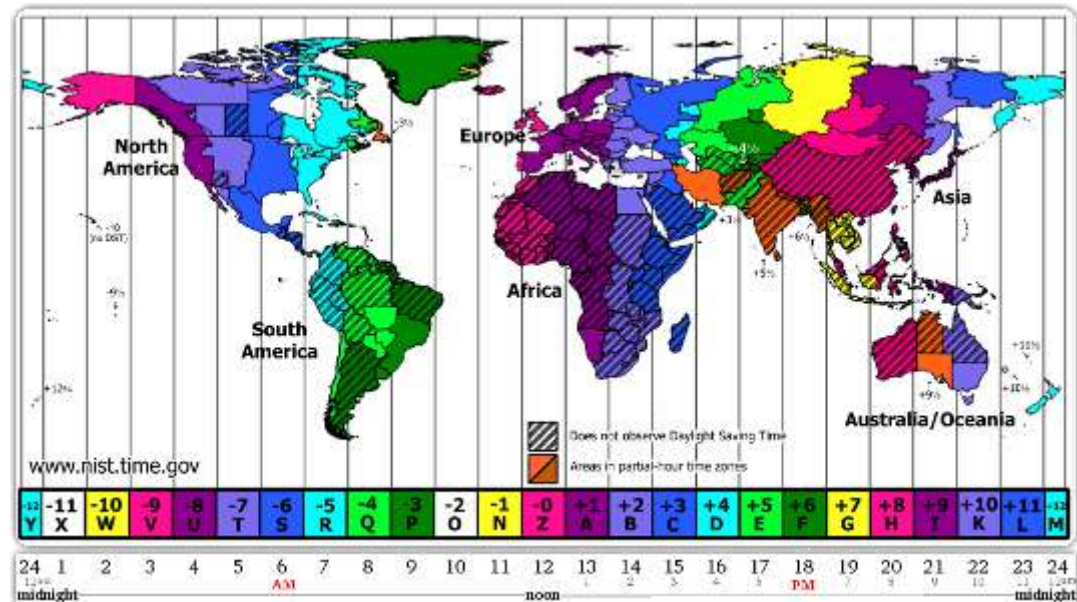

- Why would you want remote reporting?
 - Lack of local histopathologist/expertise
 - Use of time zones

Remote reporting

- Why would you want remote reporting?
 - Lack of local histopathologist/expertise
 - Use of time zones

Delhi - London 5.5 hours

Heidelberg – New York 6 hours

Remote reporting

- Why would you want remote reporting?
 - Lack of local histopathologist/expertise
 - Use of time zones
 - Lifestyle (histopathologists)

0 5 10 15 20 cm

Remote reporting

- Where and how should we start?
 - Peripheral hospitals (e.g frozen sections).
 - Gulf + developing world.
 - ? Joint venture with Western private health care providers (e.g HCA, Capio etc).

UK EQA Schemes

- External Quality Control Schemes
 - Sets of slides circulated to histopathologists.
 - Histopathologists report cases.
 - Scored anonymously (candidate numbers).
 - Repeated poor performance.

→ Re-train

Virtual Microscopy EQA schemes

- Many advantages:

- 1 set of slides.
 - Cost
 - Can use small biopsies
- Cost (No postage).
- Uniform sections.

UCL:

<http://virtualcellpath.histopath.ucl.ac.uk>

Leeds University:

<http://www.virtualpathology.leeds.ac.uk>

- Disadvantages:

- Variable computer access/connections.
- Pathologist compliance.

Teaching

- Extremely useful here.
 - Slide access pre-courses.
 - Image libraries.
 - E-learning (www.eurocytology.com.)

Areas of difficulty

Areas of difficulty

- Variable web access + computer types (PC/Mac)
- Hospital firewalls
- Choice of software + cost
 - Image analysis
 - Image databases/websites

Home Public Teaching Slide Library EQA Tissue Bank Help

Welcome to the University of Leeds Virtual Pathology Home Page!

Available on this site are the following:

- National Cancer Imaging Archive (NCIA) - Leeds resource arriving soon
- NEW >>>** [Leeds JISC Collection](#)
- [Virtual slides of common human cancers](#). These may be of interest to cancer patients or individuals studying cancer at any level.
- [Our slide library of educational slides available for viewing](#)
- [Undergraduate](#) and [postgraduate](#) teaching packages **NEW >>>** [Black Box cases](#) and [Wednesday Teaching cases](#)
- National external quality assurance schemes for [renal](#), [gastrointestinal](#), and [liver](#)
- [Liver Pages](#) - for liver histopathology EQA scheme, and other liver CPD.
- [Leeds Gift Tissue Bank](#). View cases that have been added to this [tissue bank](#).
- National Cancer Research Institute [clinical trial demonstrator](#) linking radiology with pathology.
- [Clinical trials](#) running from Leeds. [Classic trial pathology and macros](#).
- National Bowel Cancer Screening Programme** [Guidelines and examples](#)
