
BREAKING THE GLASS SLIDE HABIT: How digital pathology is revolutionizing tissue biomarker research and diagnostic pathology

Peter W Hamilton
Professor of Bioimaging and Informatics
Queen's University of Belfast
i-Path Diagnostics Ltd

2nd European Workshop on Tissue Imaging and Analysis
Heidelberg June 25-26, 2010

Image Analysis in Pathology is not new !

Harley TJ Jr, Kanal LN, Randall NC: System considerations for automatic image screening, *Pictorial Pattern Recognition*. Edited by GC Cheng, RS Ledley, DK Pollock, A Rosenfeld. Thompson, Washington D.C., 1968

A change is coming: Virtual Microscopy

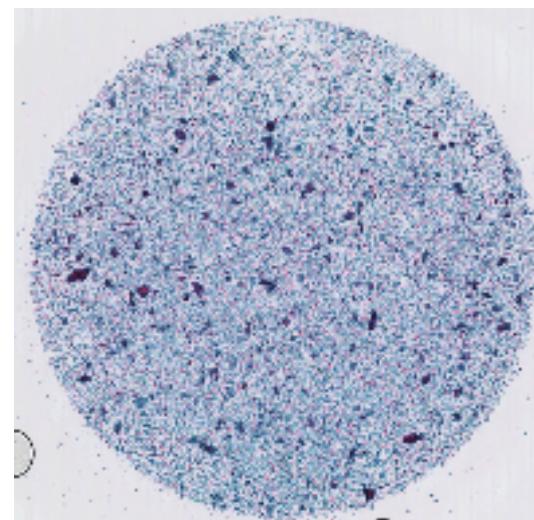

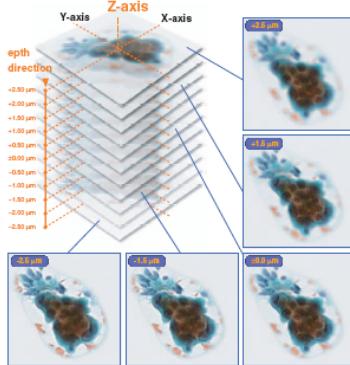

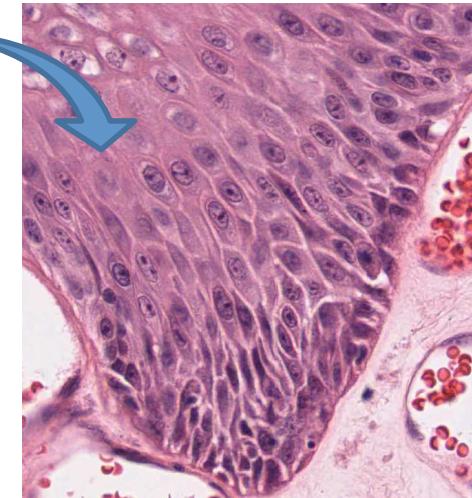

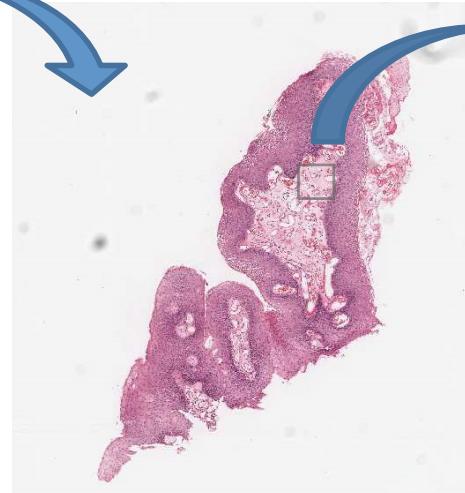

Digital Pathology

Virtual Slides are very large images !

0.23 microns per pixel
104,000 x 85,000 linear pixels
Billions of pixels
Gigapixel images
300 cases per day = 100 terabytes per year

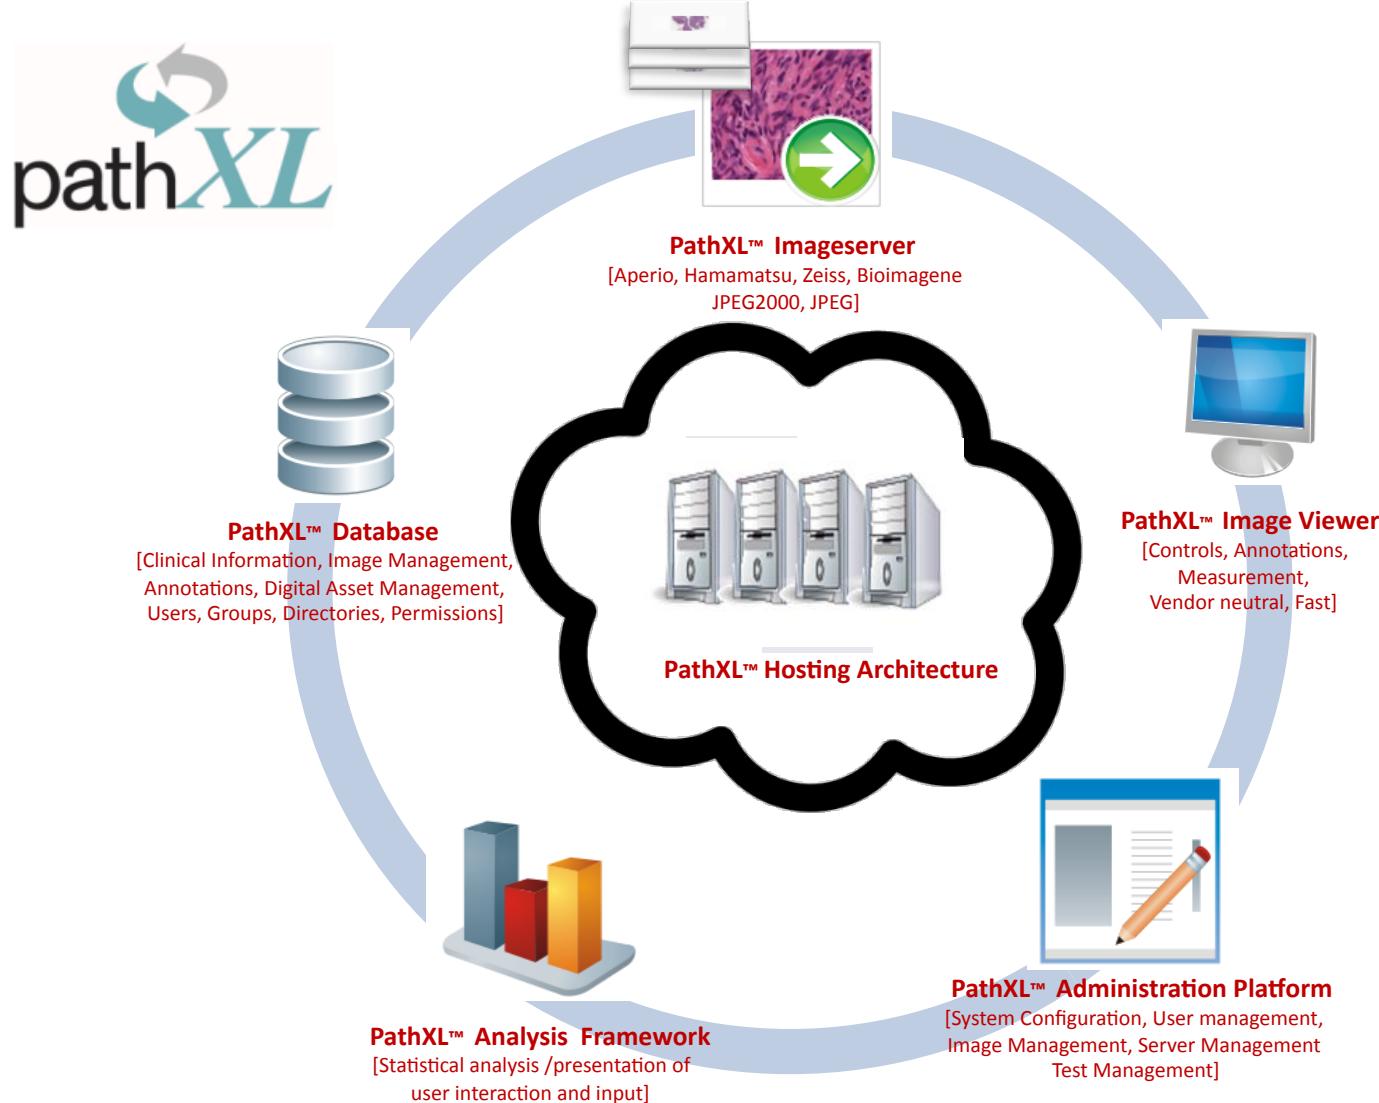

16 Gigabyte : TIFF JPEG compressed

Teaching Series
Cervical LBC
100 samples
54 layers
4 Terabytes
Slide catalogue

Northern Ireland Virtual Tissue Archive (NIVTA)

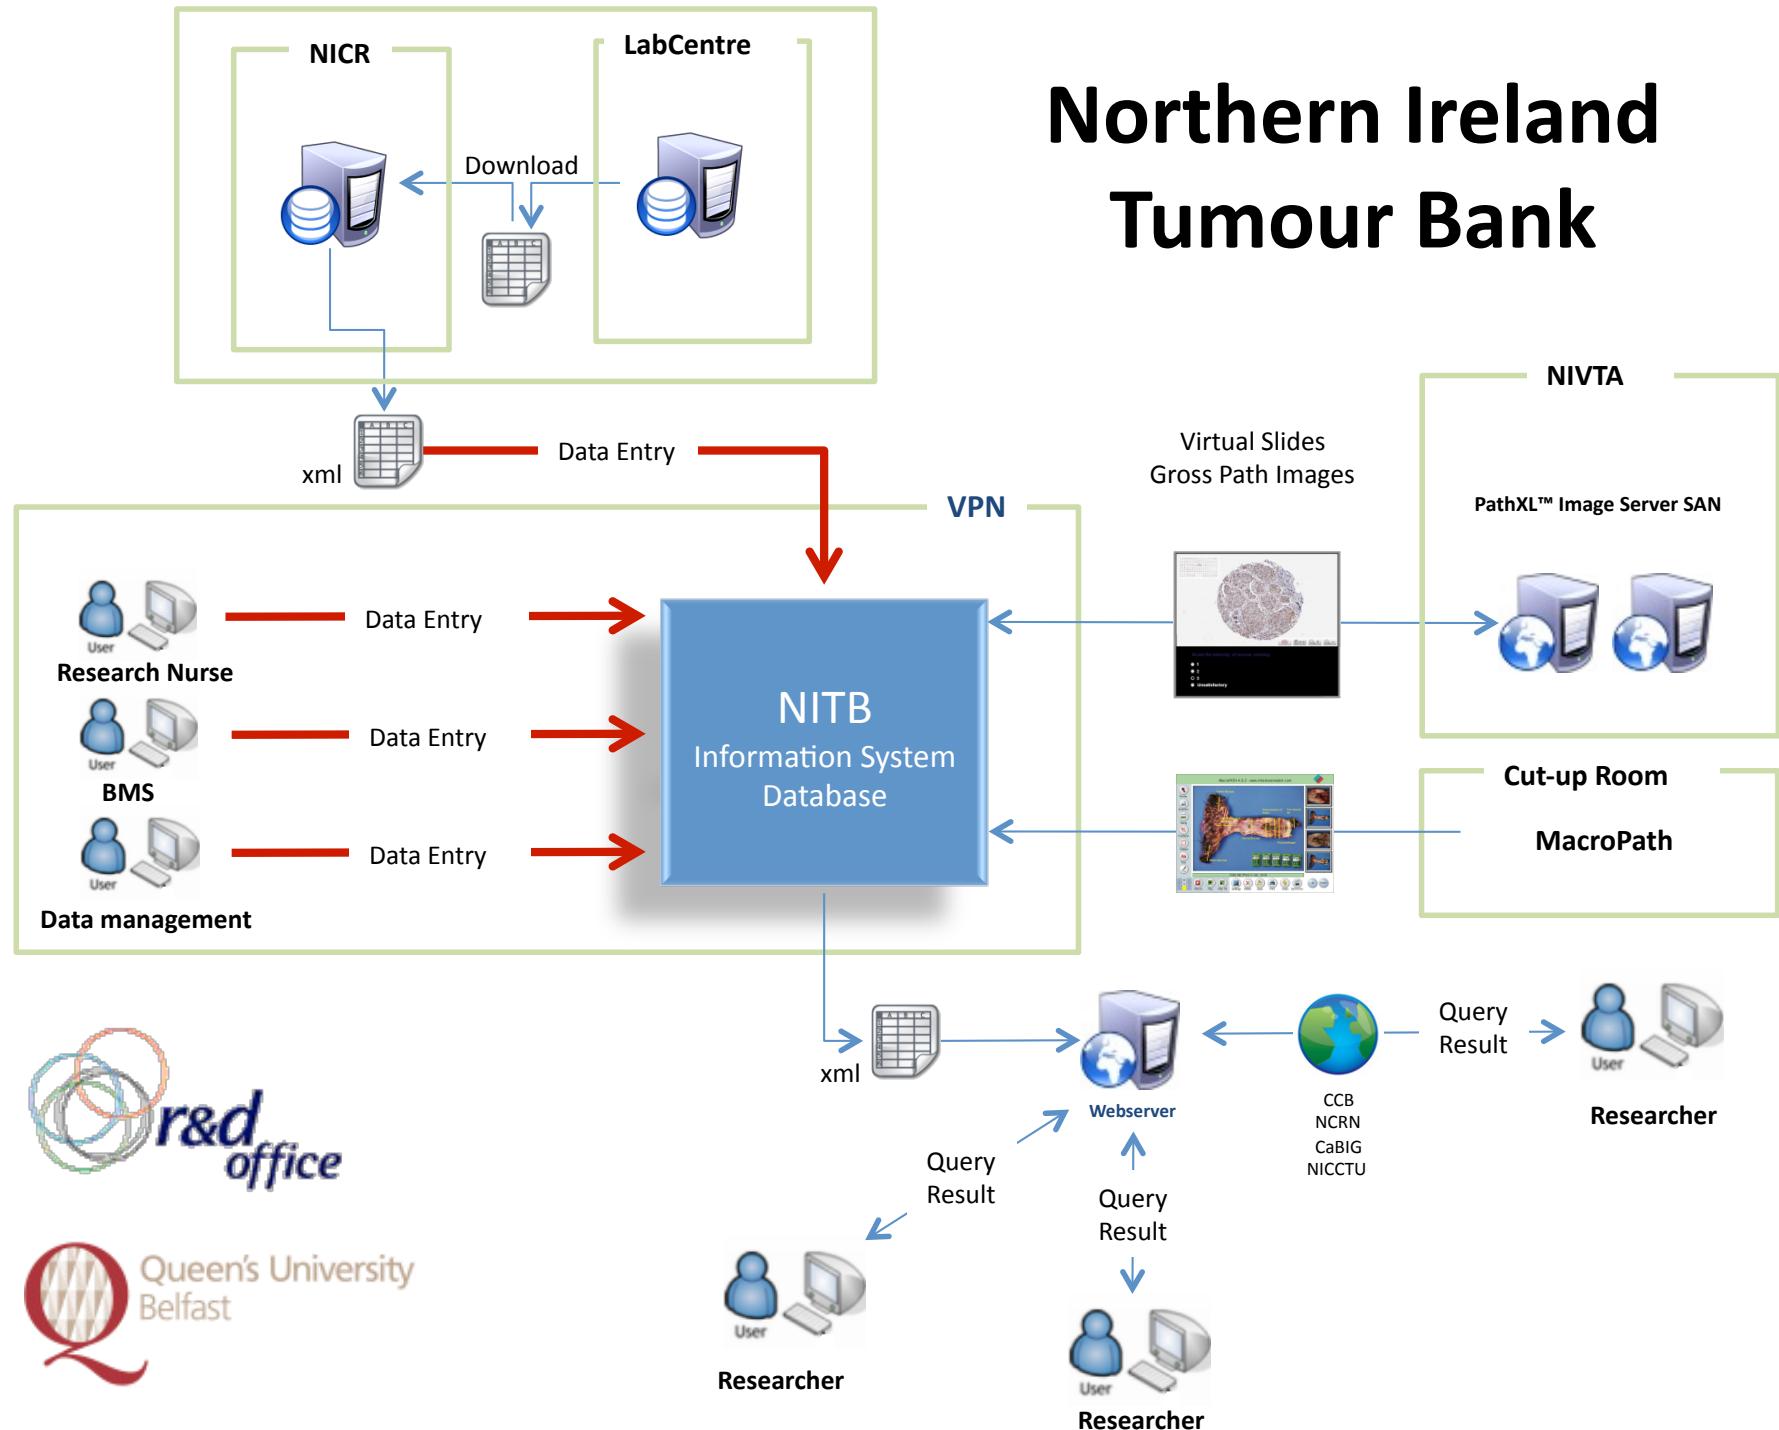

The screenshot shows the pathXL software interface. At the top, there is a navigation bar with icons for Connect, Share, Help, Your Account, and Logout. Below the navigation bar, there are four small images of people in lab coats. The main menu on the left includes options like Breast Cytopathology, Cervical Histopathology (which is currently selected), Breast Histopathology, Urine Cytopathology, Cervical LBC, UNICAS ICC, Tissue Microarrays, Melanocytic Skin Lesion Study, MDT Meeting, and Lectures. The central content area is titled "Cervical Histopathology" and includes text about the cases being contributed by Professor Glenn McGivern from the Royal Group of Hospitals, Belfast. It also mentions that the cases represent a range of benign and intraepithelial neoplastic lesions. Below this, there is a section titled "Cases" with a thumbnail for "Case 1" and a "View this case" button.
